

1. Prepare a project to load the image from server and show to the user:
 - a. Image URL should be configurable.
 - b. If you think that it is needed, add progress indicator.
 - c. If you think that it is needed please add unit tests.
 - d. Choosing between swift/obj-c - it's up to you.
 - e. Propose solution for handling situation when several photos are requested (one after the other).

```
final class ImageViewController: UIViewController {  
    @IBOutlet weak var imageView: UIImageView!  
  
    // place your code here  
    .....  
}
```

2. Please prepare a **Project Readme** with following things:
 - a. Please mention reasons if you use any 3rd party frameworks.
 - b. Please mention your architectural decisions/design patterns used and its reasons/alternatives.
 - c. Flow diagram or explanation is a plus.
 - d. Any other important things you would like to mention.
